Overview

Bootcamp Graduate & Full-Stack Developer passionate about solving problems and increasing the efficiency of products and teams using technology.

Projects

GTask – A responsive project management and task tracking Web Application for teams of all sizes.

<https://gtasktracker.netlify.app/>

Designed, developed, and deployed an Apollo-GraphQL API that uses custom resolvers to mutate and query a Mongo database. As well as a Front-End Client-Side using React, NodeJS, HTML, CSS, and Javascript.

Rebal Me – A micromobility operations app which was sold to Uber in 2020 and continues to be used by multiple cities throughout North America.

<https://rebal.me/>

Gathered requirements and fed insights to the software development team with the goal of maximizing functionality for end-users.

Github Pages Portfolio

<https://gabenedden.github.io/>

Built a responsive, single page application, with React and CSS; includes project showcase, and dark-mode using local storage and state management.
